EDUCATION

Ivy Tech Community College — Sellersburg, IN
AS Computer Science — *May 2025*

TECHNICAL SKILLS

Languages: C++, Python, MySQL, JavaScript, HTML/CSS
Frameworks: Node.js, Tailwind, Next.js, React, Django
Developer Tools: Git, Postman, VS Code, Visual Studio, Xcode
Libraries: pandas, Tensorflow, OpenCV, Material-UI, Bootstrap

EXPERIENCE

Server — September 2022 – December 2023
Kansai Japanese Steakhouse — *Clarksville, IN*

- I anticipate the customers needs in a very fast-paced environment. I have a great understanding of our menu and make sure the customer knows what they're getting. I also communicate effectively with the team to make sure every customer has an enjoyable and memorable experience whilst they are dining.

PROJECTS

Personal Portfolio | *HTML/CSS, Javascript, React, Node.js, Material-UI* — August 2023 – Present
- ∗ Developed a full-stack web application using React
- ∗ Used Javascript and CSS for each separate section of the application to construct a fluid and sleek design. Also used multiple material-ui components and tools to further enhance the look and functionality of the application
- ∗ Developed the application to be accessible and have a user-friendly interface on both mobile and desktop
- ∗ Implemented a typewriter effect, and a folder grid for projects. Also hosted it using Netlify through a Github repository

Multi-function Discord Bot | *Discord.js, Node.js, MongoDB, Play-dl* — December 2023 – Present
- ∗ Developed a multi-functional Discord bot designed to enhance user interaction and server management on Discord. Implemented various features for entertainment, server administration, user engagement, and it's still being updated with new features
- ∗ Integrated music streaming capabilities allowing the bot to play, skip, stop, queue, and loop music in voice channels
- ∗ Developed commands for kicking, banning, muting, and unmuting users with correct permissions as well as a purge function to delete multiple messages at a time
- ∗ Also created interactive buttons for users to self-assign/remove roles within a server
- ∗ Enabled mathematical operation functionality like addition, subtraction, multiplication, and division directly through chat commands
- ∗ Programmed the bot to send custom embeds with user-defined content for enhanced messaging and announcements
- ∗ Implemented a real-time latency feedback feature to report the bot's current latency
- ∗ Configured to display dynamic status messages, enhancing its interactive presence on the server

Password Manager | *Python, SQL, Git* — October 2023 – Present
- ∗ Developed a password manager using bcrypt and AES-256
- ∗ Integrated multiple layers of security by hashing, salting, peppering, and encrypting passwords
- ∗ Implemented a user registration window
- ∗ Also implemented 2FA for an additional layer of security

Linktree Link Page | *HTML, CSS* — December 2023 – Present
- ∗ Using HTML/CSS I made a simple static page that displays links for multiple different social media/programs that I use
- ∗ Integrated an image that and using CSS made it to where it gives an illusion that the page is moving through space
