# Angelo Gonzalez

502-830-2363 | angelo3649@icloud.com | linkedin.com/in/angelo-gonza | github.com/gelogonza

## EDUCATION

**Ivy Tech Community College** — Sellersburg, IN
*AS Computer Science* — *May 2025*

## TECHNICAL SKILLS

**Languages**: C++, Python, MySQL, JavaScript, HTML/CSS
**Frameworks**: Node.js, Tailwind, Next.js, React, Django
**Developer Tools**: Git, Postman, VS Code, Visual Studio, Xcode
**Libraries**: pandas, Tensorflow, OpenCV, Material-UI, Bootstrap

## EXPERIENCE

**Server** — September 2022 – December 2023
*Kansai Japanese Steakhouse* — *Clarksville, IN*

- I anticipate the customers needs in a very fast-paced environment. I have a great understanding of our menu and make sure the customer knows what they're getting. I also communicate effectively with the team to make sure every customer has an enjoyable and memorable experience whilst they are dining.

## PROJECTS

**Personal Portfolio** | *HTML/CSS, Javascript, React, Node.js, Material-UI* — August 2023 – Present
- * Developed a full-stack web application using React
- * Used Javascript and CSS for each separate section of the application to construct a fluid and sleek design. Also used multiple material-ui components and tools to further enhance the look and functionality of the application
- * Developed the application to be accessible and have a user-friendly interface on both mobile and desktop
- * Implemented a typewriter effect, folder grid for projects, and a fade-in effect by utilizing CSS

**Multi-function Discord Bot** | *Javascript* — Feb 2023 – Feb 2023
- * Made a discord bot using OpenAI API
- * Using OpenAI API, the bot was practically made into my own ChatGPT bot.

**Password Manager** | *Python, SQL, Git* — October 2023 – Present
- * Developed a password manager using bcrypt and AES-256
- * Integrated multiple layers of security by hashing, salting, peppering, and encrypting passwords
- * Implemented a user registration window
- * Also implemented 2FA for an additional layer of security

**Restaurant Management System** | *C++* — December 2023
- * Program initializes an array of tables ranging from 2-10 person tables
- * Allows the user to make reservations by providing customer name, reservation time, and the number of people
- * Customers are able to check-in and the program finds a suitable table for the reservation based on the reservation's party size
- * It also allows order entry, order completion, and bill calculation and payment based on the restaurants menu items

**Linktree Link Page** | *HTML, CSS* — December 2023 – Present
- * Using HTML/CSS I made a simple static page that displays links for multiple different social media/programs that I use
- * Integrated an image that and using CSS made it to where it gives an illusion that the page is moving through space
